PRODUCTIVE

ALL A BARISTA
COULD DESIRE

SMART LIGHT GROUPS WITH RGB LEDES

TOUCH SELECTION

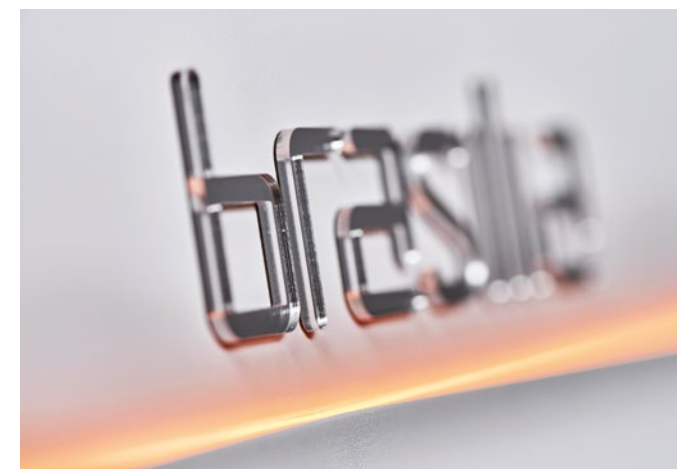

MOVE FREELY BEHIND THE BAR AND LET **ITALIAN STYLE** INSPIRE YOU

THE BL-500 LIGHT EDITION COMBINES THE INTELLIGENCE OF ITS PRODUCTIVE HEART WITH THE CULT LOOK OF ITS DESIGN

Modern and elegant lines, RGB Led lighting above the coffee groups to integrate into any ambience, Led strips that highlight the prestige of the Brasilia brand, stainless-steel grilles; everything about the BL-500 LE expresses style, just what you want to communicate with every creation in your bar.

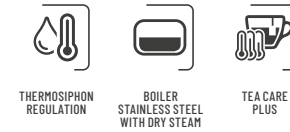

The easily customised touchscreen control panel guarantees intuitive and simple operation, as do the ergonomic filter holders, which improve handling, and the height-adjustable feet, ideal for adapting to any work space.

OFFERING QUALITY HAS NEVER BEEN SO EASY: **AMAZE YOUR CUSTOMERS**

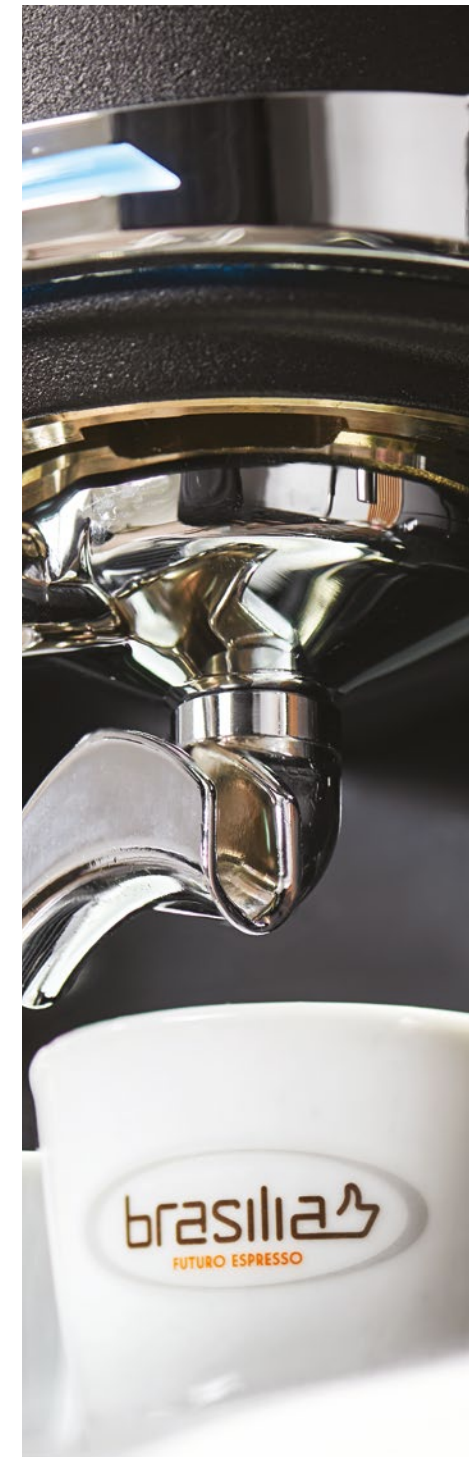

When you have the right tools, you can produce more, with better quality and less effort. Each technological system in the BL-500 LE has been designed to make the barista's job easier, allowing them to satisfy a larger number of customers by constantly offering products of the highest quality.

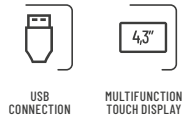

The B16 group, with electronic pre-infusion, ensures that your coffee is of excellent and constant quality, as does the Bullone Rosso system, Brasilia's patented technology that guarantees maximum thermal stability of the water distributed and the best results for your products.

Thermosiphon regulation allows you to set the extraction temperature for each coffee group, to get the most out of each blend, without lowering boiler pressure. Coffee groups can also be programmed autonomously with personalised recipes. The BL-500 LE's stainless-steel boiler offers you a double advantage; it reduces the release of heavy metals into the water, and allows the dispensing of dry steam for better fresh milk frothing.

Thanks to the Tea Care Plus technology, you can also satisfy tea and infusion lovers, because you can set and choose from three different temperatures for your water wand.

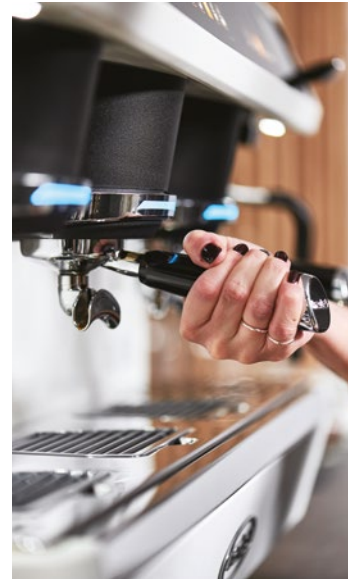

TECHNOLOGY FOR TRUE PROFESSIONALS: ENJOY EVERY MOMENT OF YOUR WORK

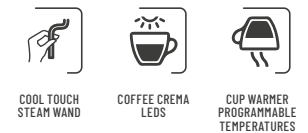

The BL-500 LE is controlled with a touch, thanks to the 4.3" multi-function colour touch-screen display that allows you to manage groups temperature, infusion and dispensing time, view machine function status and set the various operations from the maintenance menu.

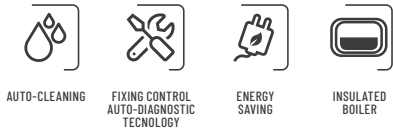

The BL-500 LE interface allows you to programme your machine directly on board or via PC, and with the USB connection, you can upload and download data.

The definable settings include four different levels of cup warming, allowing you to have your cups at the right temperature in any environment and at any time of the year. With the Coffee Crema Leds beneath the coffee groups, your working area is always well-lit, allowing you to keep the quality of the coffee cream under control.

And in terms of working well, the "Cool Touch" dry-steam wand lets you froth milk more precisely, letting you prepare creamy cappuccinos in a flash, without the risk of scalding.

AUTO-CLEANING

FIXING CONTROL
AUTO-DIAGNOSTIC
TECHNOLOGY

SAVING

INSULATED
BOILER

EASY MAINTENANCE, THE SECRET FOR THOSE LOOKING TO AVOID DOWNTIME

The Easy maintenance of the BL-500 Light Edition lets you focus completely on your work, above all on those days when orders just keep coming. With the Auto Cleaning function, you can set automatic cleaning, even for one coffee group at a time, meaning that you never have to interrupt serving.

Thanks to Fixing Control, the auto-diagnosis system for the BL-500 LE, you will be able to quickly identify and solve any problems, also because the machine's components can be easily accessed.

The Smart Light on each coffee group with RGB Led lights that can be personalised according to the ambience, will impress your clients and are also useful for managing your workflow; you can adjust them so that the colour changes according to the machine status.

AN INTELLIGENT MACHINE CAN ALSO BE RECOGNISED BY ITS CONSUMPTION

The BL-500 Light Edition has been designed with specific focus on efficiency, allowing you to obtain significant energy savings without losing out on performance. The insulated boiler ensures reduced heat dispersion, thus reducing overall power consumption.

Furthermore, the machine is equipped with an Energy Saving mode. To activate it, simply enter programming, touch the indicator on the 4.3" LCD display, and the boiler pressure will be reduced to a minimum; to deactivate the mode, press one of the dispense buttons, and the boiler pressure will return to the original level.

TECHNICAL CHARACTERISTICS

PRODUCT QUALITY

B16
BREWING UNIT

Guarantees constant thermal stability; better extraction quality and increased productivity.

ADJUSTABLE ELECTRONIC
PRE-INFUSION

To adapt pre-infusion timing and release the maximum aroma from any coffee blend.

BULLONE ROSSO
SYSTEM

Exclusive technology for pre-heating and thermal stability of dispensed water.

THERMOSIPHON
REGULATION

The possibility of adjusting the thermosiphon circuit to three different levels to manage different temperatures for each group.

BOILER
STAINLESS STEEL WITH DRY STEAM

Reduces the release of heavy metals into the water, and dispenses dry steam for better fresh milk frothing.

TEA CARE PLUS

Programming of 3 water temperature levels to exalt aromas and respect the right infusion for any type of tea.

ENVIRONMENT

ENERGY SAVING

Improved energy efficiency; reduces boiler pressure when the machine is on stand-by and also switches off the Led lighting.

INSULATED
BOILER

Reduced heat dispersion and therefore lower energy consumption.

WORKFLOW

TOUCH
SELECTION

Touchscreen with backlit buttons for drink selection and programming of machine parameters.

MULTIFUNCTION
TOUCH DISPLAY

Machine parameter management: view of function status, management of groups temperature, infusion and dispensing times, and management of the maintenance menu.

COFFEE CREMA
LEDS

Led lighting for the working areas, to keep the coffee cream under constant control.

SMART LIGHT
GROUPS WITH RGB LEDES

RGB Leds on each group, with programmable colours to indicate machine status.

CUP WARMER
PROGRAMMABLE TEMPERATURES

4 programmable temperature levels to have the right cup temperature in all climates.

COOL TOUCH
STEAM WAND

High-performance steam wand with thermal insulation to guarantee increased protection against scalding and easy cleaning.

MAINTENANCE

USB
CONNECTION

To upload and download machine data.

AUTO-CLEANING

Automatic cleaning, even of just one group at a time, without having to interrupt use.

FIXING CONTROL
AUTO-DIAGNOSTIC TECHNOLOGY

Self-diagnosis technology with codes to quickly identify machine status and facilitate technical support.
